Precise Steel Foundation for the Ministry

RR dream - I was watching as the framework for a machine was being built. The framework was made out of steel. It had two vertical "sides" (a right and a left side) that were made out of steel that was about 1" thick. Then I saw the horizontal decking being put in place (which was made out of wood boards). I had the thought that this wood wouldn't hold the sides of the machine together correctly, and then I saw a steel cross-member being put in place to hold the two steel sides together.

Steel crossmember

RR shares - (condensed)

1. The first two images (see them above) are a depiction of what RR saw in the dream.
2. This type of construction has a very distinct "right" and "left" side - all of which is "tied together" by a **CROSS-member**. This provides the foundation for the **wood** (ministry) decking (to walk on)
3. This type of mechanical construction has the advantage that it is straight-forward to add additional components to the foundation - because the sidewalls (and crossmembers) form a common datum/reference point for mounting things onto.
4. Left = Physical, Right = Spiritual.  
(RS - Left physical Bride, Right the Lord.  
Working together half and half producing the Lord's will legally in the Earth.

Examples of Machines that use this type of foundational construction:

Machine used for slitting clear Tape.
